

## PROYTECСА SECURITY PRESENTS THE LATEST IN ITS RANGE OF ROBOTS

### NEW aunav.CID-Light, THE ROBOTIC INTERROGATOR ARM. C-IED TOOL FOR LIGHT ARMORED VEHICLES

*A lighter robot arm and last generation to reduce operation time and risks in missions.*

The **aunav.CID-Light** is a light interrogator arm multi-vehicle oriented to the detection and neutralization of IED/EOD artifacts.

Representing the market evolution of the robotic arms thanks to its control innovative technology , oriented to help the operator in handling the arm , reduce the operation time drastically and the mission risk, it also features the possibility to use automatically managed tools like weapons and disruptors

This last generation light arm allows to securely perform investigating operations, removal and de-activation of IEDs up to 400kg at a distance up to 8.5 m from the vehicle. The same as its forerunner the arm **aunav.CID**, it can be fitted with metal detectors, GPR (Ground Penetrating radar) or CBRN sensors.

Once the threat has been identified, it can be neutralized using the automatic tool system featured on the arm **aunav.CID Light**, the disruptors or the grip without needing to exit the vehicle.

Its design encapsulates elements that previously were susceptible to be damaged thus minimizing the risks in case of an attack during a mission deployment ■

## PRESS RELEASE

### About Proytecса

Proytecса Security is a Spanish company with a clear international outlook whose headquarters are in Madrid and whose main facilities are in Huesca. Our mission is to design, develop, produce and sell our own technological solutions that adapt to the specific Security and Defence needs of our national and international customers

The company's activity focuses on 3 lines:

- The family of remote-controlled robots for use by police bomb squads and military EOD (Explosive Ordnance Disposal) specialists has been evolving constantly since the first au-nav.EOD, designed in close collaboration with Spanish national police force, was put into service more than ten years ago. Because of the excellent operational results achieved, the aunav family has continued to grow since then, now offering a range of models designed for specific theatres of operation. These robots are now being exported to more than 30 countries around the world.

- argus access control and security systems are high-range products developed initially for the banking sector. PROYTECСА SECURITY currently has several models of intelligent security doors and interlocking doors for all types of customers, and is the indisputable leader in the top tier of this market. Turnstiles are also good for controlled and quick access to places with a high number of people such as metro stations, train stations and office buildings.

- thewall** is the perimeter protection solution using security fencing to protect railway lines or perimeters around infrastructures that need to be robust, durable and with incorporated anti-intrusion alarms. With constant innovation we have developed solutions with different products and configurations, offering assembly alternatives depending on your needs and guaranteeing high levels of security at all times.
